

APPLICATION FOR PERMISSION AND SUPPORT

OpenHostel - Proposed Digital Hostel Management Web Application

Date: _____

To,

The Respected Warden

CSA Hostel, UIT RGPV, Bhopal

Subject: Request for permission to develop and conduct a controlled pilot of the OpenHostel web application at CSA Hostel.

Respected Sir/Madam,

We, a team of students from UIT RGPV, are developing **OpenHostel**, a digital hostel management web application. The purpose of this initiative is to make everyday hostel processes simpler, more transparent, and better organised for students, wardens, mess managers, and the administration.

We respectfully request your permission to develop and demonstrate the project as a limited, controlled pilot at CSA Hostel. During the pilot, no administrative rule, fee, admission procedure, or official record will be changed without prior written approval from the appropriate authority.

Brief Project Overview

OpenHostel is a proposed web platform that is being developed to include the following facilities:

- Student registration and application-status tracking
- Mess information, meal timings, and digital mess-pass applications
- A structured dashboard for application verification and approval by authorised staff
- QR-based meal attendance to support orderly mess operations and meal records
- Centralised, clear management of student and mess-related information

A detailed note on the proposed pilot, benefits, safeguards, and requested institutional support follows on the next page.

PROJECT VALUE AND REQUESTED SUPPORT

1. Benefits for Hostel Administration and the Warden

The platform can help present student applications, mess-pass requests, and meal records in a more organised form. It can reduce dependence on repeated register-based work, make pending requests easier to review, and provide relevant information through one controlled dashboard.

2. Benefits for Students

Students will be able to view their application status, mess information, meal timings, and pass validity online. This can reduce unnecessary visits to the office and make the process more transparent.

3. Proposed Pilot

- The initial pilot will be limited to approved CSA Hostel and mess users only.
- Only demo data or data explicitly approved for the pilot will be used. Personal information will be handled only with permission.
- The student team will improve features and workflows using feedback from the warden and mess management.
- Expansion to other hostels will be proposed only after a successful pilot and formal institutional approval.

4. Support Requested

We request permission for the pilot, guidance from a nominated contact person, and constructive feedback from the Warden. We also request that this initiative be recommended to the Director for institutional guidance and in-principle support, so that it can be developed responsibly and in accordance with institute rules.

5. Our Commitment

OpenHostel will be developed solely for academic learning and student convenience. We will respect data privacy, institute rules, administrative control, and the approval process. No feature will be treated as an official process without the approval of the concerned authority.

We therefore request you to kindly grant permission for a limited OpenHostel pilot and recommend the initiative for the Director's support. Your guidance can help this student initiative become a useful step towards better hostel management and student services.

Thank you.

RECOMMENDATION AND APPROVAL

Please record the necessary comments, recommendation, and approval below.
